APPLICATION INSTRUCTIONS

For optimum performance in overhead treatments, align the actuator opening with the mark on valve cup. When treating in a downward direction, align the actuator opening directly opposite the mark on valve cup.

WASPS AND HORNETS: Hold container in upright position. Stand safe distance, 6 – 15 ft, from nest and not directly underneath. Align actuator opening with the mark on valve cup. Aim actuator opening toward nest. Treat nest until thoroughly wet. Directly contact wasps and hornets on the nest with spray when possible. The best time to apply is in the evening or early morning, since wasps and hornets congregate on or in nest at night.

YELLOWJACKETS AND BEES: Locate nest. Align actuator opening directly opposite the mark on the valve cup. Press down on the actuator and apply, using a sweeping motion, contacting any stimulated or stirred-up yellowjackets and bees around the nest opening. Then move forward to the nest opening and apply for 6 – 8 sec directly into the nest hole.
